

## **Milestone – 1** (Submission date :22-11-2021 )

First time use of the app:

Soon after the client orders the start kit on Shopify: they will receive a code (e.g.: #EKP0000 / #FR0000 / #NL0000 / #EU0000). This code will be used for the first login into the app together with the user's e-mail.

We have to connect all Shopify stores. Actually we have 4 Stores running (German, French, Nederlands & English) a minimum of 2 more will come soon. (we need to make sure, that we can implement them easy)

This is the screen that the user will see after the splash screen, during the first time they open the app (before entering the code):

1<sup>st</sup> screen: Depending of the chosen language, there will also be some changes behind some buttons, see below

23:09

### Select language

-  Deutsch
  -  English
  -  Italiano
  -  Français
  -  Español
  -  Nederlands

2<sup>nd</sup> screen:

3<sup>rd</sup> screen:

4th screen:

If the user clicks on the top right arrow (white) or click on the skip button (previous screens), they should the following home screen:

Top of the page:

bottom:

Now: Just the message button should work. (because the User is not logged in).

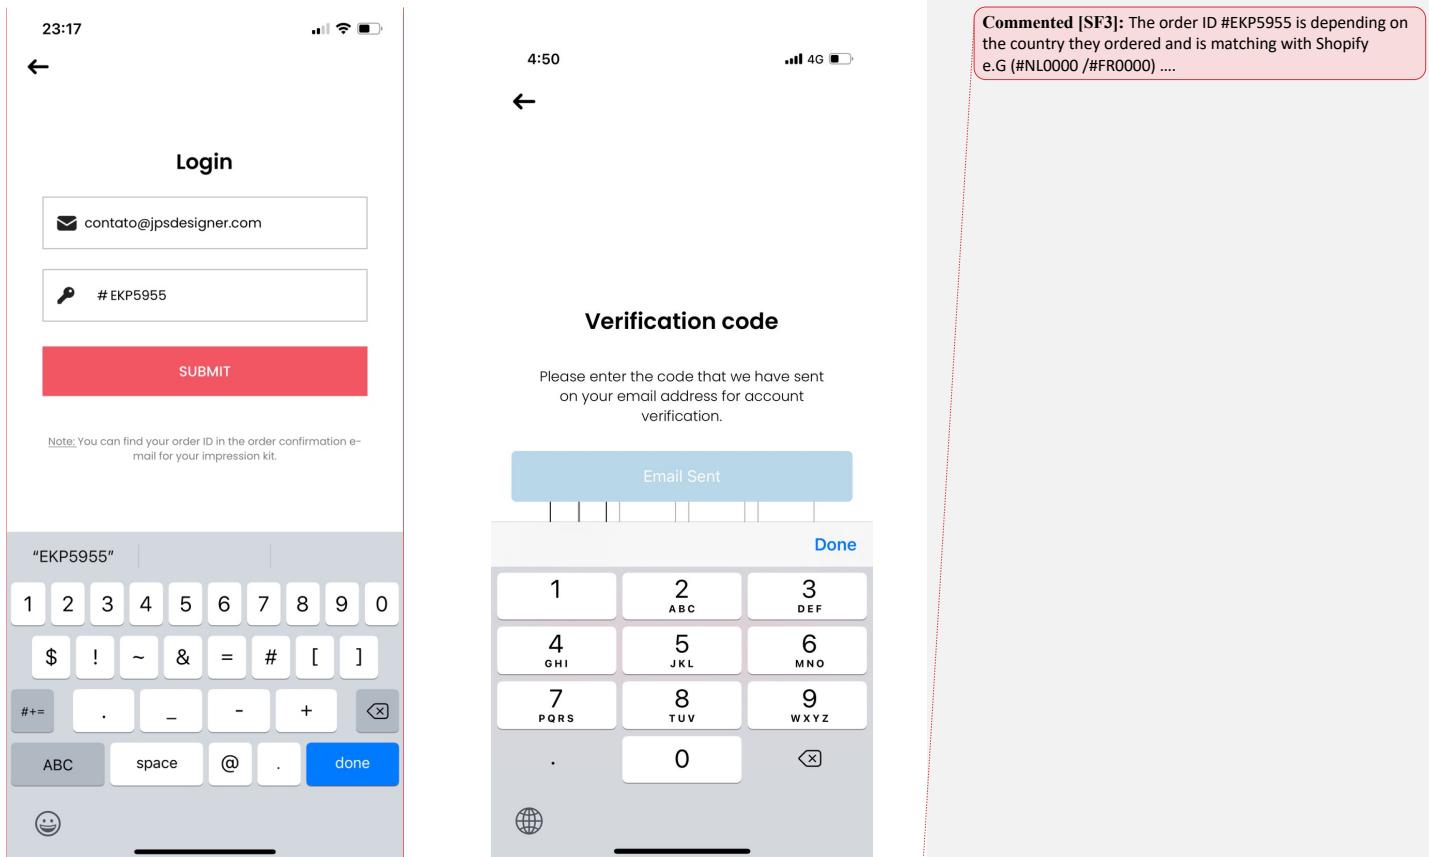

**Commented [SF1]:** We thought about showing the video "How to take impression" but its not a must have. If we decide to do this, its easier just to show in English. Otherwise we have to match with the chosen language before

**Commented [SF2]:** Depending on the country they choose at the beginning (Deutsch/English/Italiano) the button should be linked to the special Page:

DE: <https://www.smileunion.de/pages/anleitung>  
FR: <https://www.smileunion.fr/pages/set-d-empreintes>  
NL: <https://www.smileunion.nl/pages/indruckdoos>  
EN: <https://www.smileunion.eu/pages/impression-kit>  
ES: <https://www.smileunion.es/pages/...soon>  
IT: <https://www.smile-union.it/pages/... soon>

If the user try to click on another icon, he will be asked to log-in.

After the first steps mentioned above, the user is ready to login with his E-Mail and Code

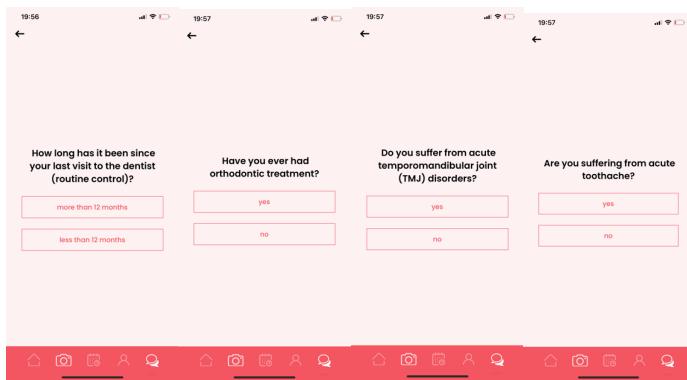

Text changes: **Note: You can find your order ID in the order confirmation E-Mail for your impression kit.**  
**(for example: #EKP0000 / #FR0000 / #NL0000)**

While the user is asked for the Verification code the user should be able to open his E-Mail and come back to Smileunion to type in his Code

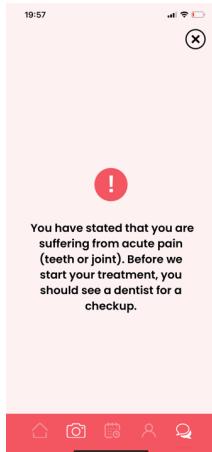

After the verifying the user, the next screen should be:

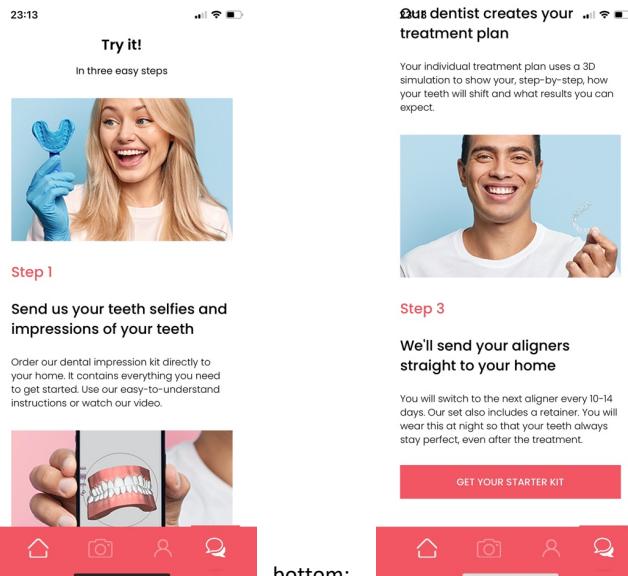

Before taking the initial selfies, the user needs to respond a questionnaire:

In case of any problem reported by the client through the questionnaire above, they will receive the following message and will NOT be able to take selfies:

When they click "X" on the right top corner to close the notification, they should be again redirected to the home screen:

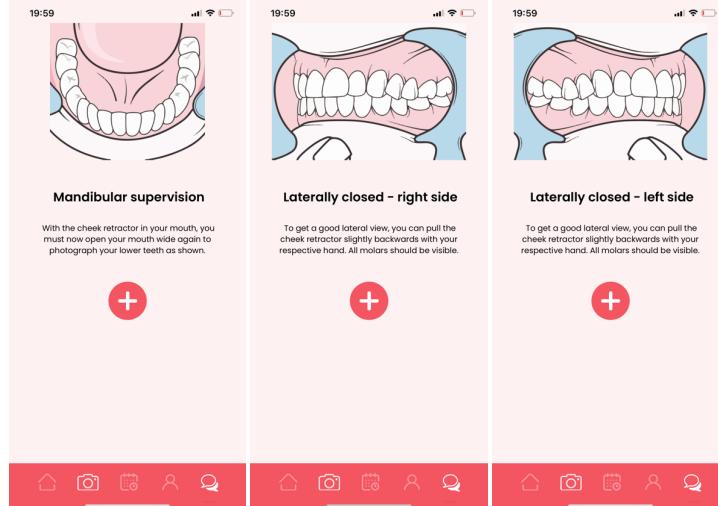

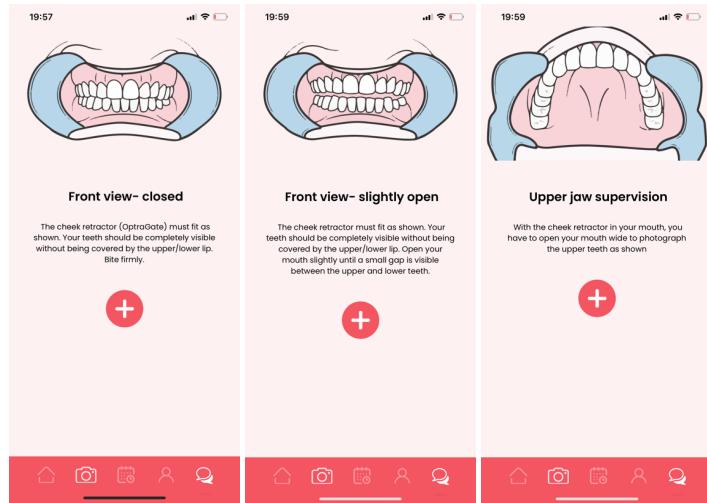

Top of the page:

bottom:

If they don't have any issues reported in the questionnaire, they should start the process of taking the pictures:

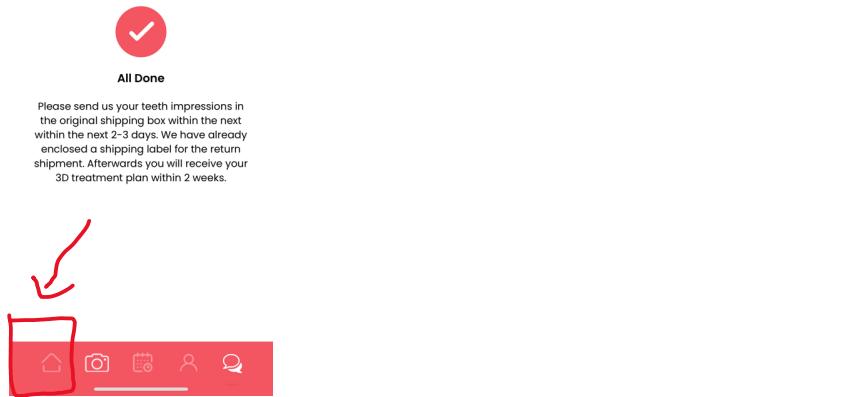

After uploading a Photo, the App should ask if you want to upload the photo or retry

After the selfies, user should receive the following:

19:59   

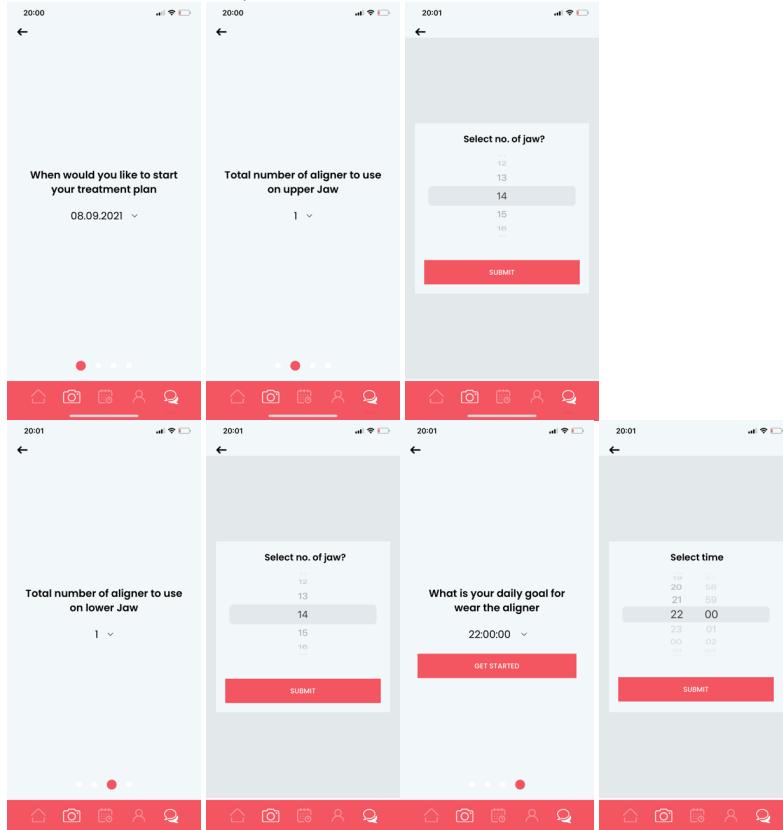

After taking the selfies and receiving the message above, when the user clicks on the icon "home" highlighted on the previous screenshot, they should see the following screen.

## **Milestone – 2 (Submission date :25-11-2021 )**

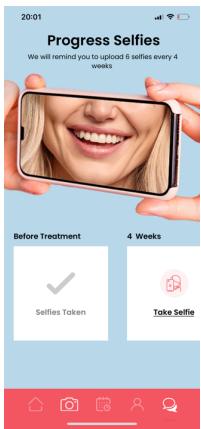

**IMPORTANT: AT THIS POINT, THE USERS MUST NEVER SEE AGAIN THE INITIAL SELFIES AND QUESTIONS:**

After user clicks on “setup new treatment”:

Instead of “Select no. of jaw” we say “Select no. of aligner” -> we already **send proofreading**  
The customer should get a **push** notification every 10 days to remind him to switch his aligner.

After selecting the treatment and submitting (as shown in the button of the last screen), users should see the Progress Selfies screen:

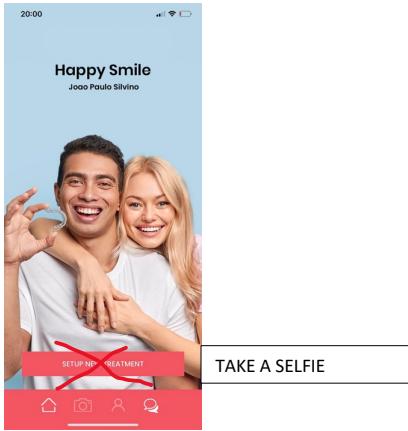

Every 4 weeks the customer should get a push notification, to upload new photos.

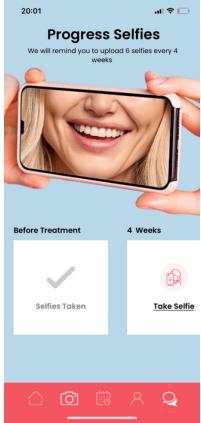

After the first selfies, the user should not be able to upload photos before another 4 weeks.

After his first selfies he should wait 4 weeks until he can upload new photos. User should then upload his photos within 7 days. So we avoid, that a user upload every photos at the end of his treatment.

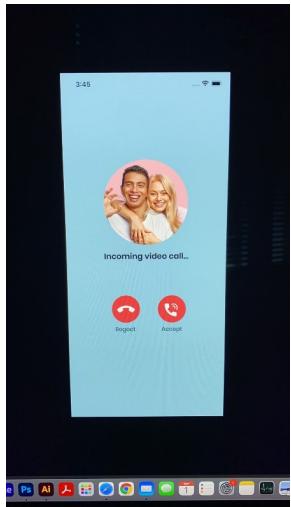

After adding selfies according to the progress (4 weeks, 8 weeks, 12 weeks and so on) whenever the user clicks the "Home" icon, they should be redirected to this home screen:

The button "SETUP NEW TREATMENT" on the home screen above, should contain the text "TAKE A SELFIE". When the user clicks on it, he/she should be redirected to the page:

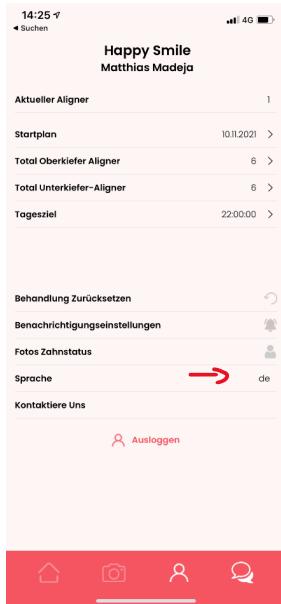

### **Milestone – 3 (Submission date :03-12-2021 )**

Videocall function:

We need a Push notification if the patient (user of the App) gets a phonecall from us.

In this menu, the user should be able to change some options. For Example Start date, Upper Jaw aligner etc.- most of it is possible today.  
But the user should also be able to change the language or see the pictures he uploaded recently
